

Princesses with Power tools contest

Compete for a chance to bring the STEM princesses to your Montana community!

The MSU Science Math Resource Center and the Montana Girls STEM Collaborative are hosting a statewide contest to select a winner to bring the Reinvented Magazine Princesses with Powertools to their community!

The first place organization will be able to bring the princesses to their community, and the top ten organizations will receive a prize package from the Science Math Resource Center.

Your youth-serving organization can compete in one of three categories:

1. **Art project:** do an art project with your students that showcases how STEM can change the world.
2. **Powertool project pitch:** have your students create a pitch for a project they can build using powertools to improve their school or community.
3. **Poster contest:** submit a collection of student-made posters that feature inspirational women in STEM (maybe some from your community!)

Submissions due Nov. 10; Notifications by Dec. 10, 2026
